

*For immediate release:  
November 20, 2017*

GMI is pleased to announce it is now certified as an Approved Firestop Contractor by FM Approvals.

As a means of increasing the reliability and performance of firestopping systems, Approval Standard 4991 was developed to ensure that an Approved Contractor employ at least one Designated Responsible Individual (DRI) who understands the requirements and restrictions of the various listing agency publications, the FCIA Manual of Practice and FM Approvals Approval requirements. The DRI must also have a knowledge of firestopping components, systems and assemblies, their proper selection, installation, and the ability to identify and implement corrective action when deficiencies or non-conformances occur.
